How to care for your new wood product

Although the finish on your piece is water resistant, it is not impervious to standing water and condensation. As with any fine furniture finish, spills should be wiped up in a timely manner. We recommend using coasters to protect from water condensation and potholder to protect from heat.

We tend to use General Finishes products and the following link and description will apply if so. Please ask us for the name of the product that was used to finish your piece.

[From General Finishes-](#)

After your finish has cured, the best way to clean is with a water-damp rag. If your surface requires deep cleaning due to grease or grime build-up, add a speck of a strong dish detergent, such as Dawn or a bit of vinegar to your damp rag.

If need deeper cleaning, use [General Finishes Orange Oil Polish](#).

Avoid using oil-soap or silicone-based daily cleaners or dusting sprays. These products and the chemicals in other cleaners can contaminate your finish, preventing adhesion of future finishes.

NOTE: Do not clean furniture until the finish has cured completely.

Cure Time Guidelines:

- Water Based Finishes: 21 days
- Oil Based Finishes: 30 days
